

# Demo-/Student Version of Yutrafic Office

Download the Demo-/Student installation package and start the corresponding setup executable. Please take note of the system requirements.

System requirements:

- PC or notebook (x64 compatible)
- System software: Microsoft® Windows 10 or Microsoft® Windows Server 2016
- Processor: at least Dual Core 2.8 GHz (recommended: 3.2 GHz)
- Available hard disk storage capacity: at least 60 GB (for installation and data)
- Main storage: minimum 8 GB (4 GB with loss of performance)
- Monitor with a resolution of at least 1920x1080 pixel
- Permissible operating system supported (see above)

For the use of the demo / student version the variant "serverless" has to be selected during the installation.

Restrictions of the demo version compared with a full version:

- Runtime max. 999 days (afterwards installation of a new version will be necessary)
- Max. 5 projects with max. 50 intersections with max. 10 versions each
- Only the perspectives "Intersection planning" and "Network planning"
- No data export
- No printout from the tree (batch printing), only the printout from the individual editors are possible and the printout is not configurable
- Permanent "synchronize components automatically" (cannot be deactivated) and no special functions (e.g. communication parameter, statistics, ...)

If the PC has access to the Internet it will check on every start of the PC, if the installed version is up-to-date. Follow the dialogue in order to get the latest version of Yutrafic Office.

Please refer to the release notes for changes and fixes included.

Amongst others the user and installation manuals can be found under folder Yutrafic Office -> Manuals. More videos regarding first steps can be found under folder Tutorials.

Under ...\\Sitraffic\\Office\\Examples there is a German project "Musterstadt" which you can import as a collection of examples.
