# YUNEX TRAFFIC

# Yutraffic® Tools SOP6Migrator

User documentation

Preparation

1. If there is no Microsoft .NET 4.6.1 (or later) framework present on your system, then as first step please install it. The download is available from Microsoft: https://www.microsoft.com/en-US/download/details.aspx?id=49982
2. Then download the Yutraffic Tools SOP6Migrator ZIP package from Yutraffic Tools webpage.
3. Uncompress the ZIP package into any folder – an installation is not necessary. Please do not change the given folder structure and do not move any files to another location, otherwise functionality might be affected.
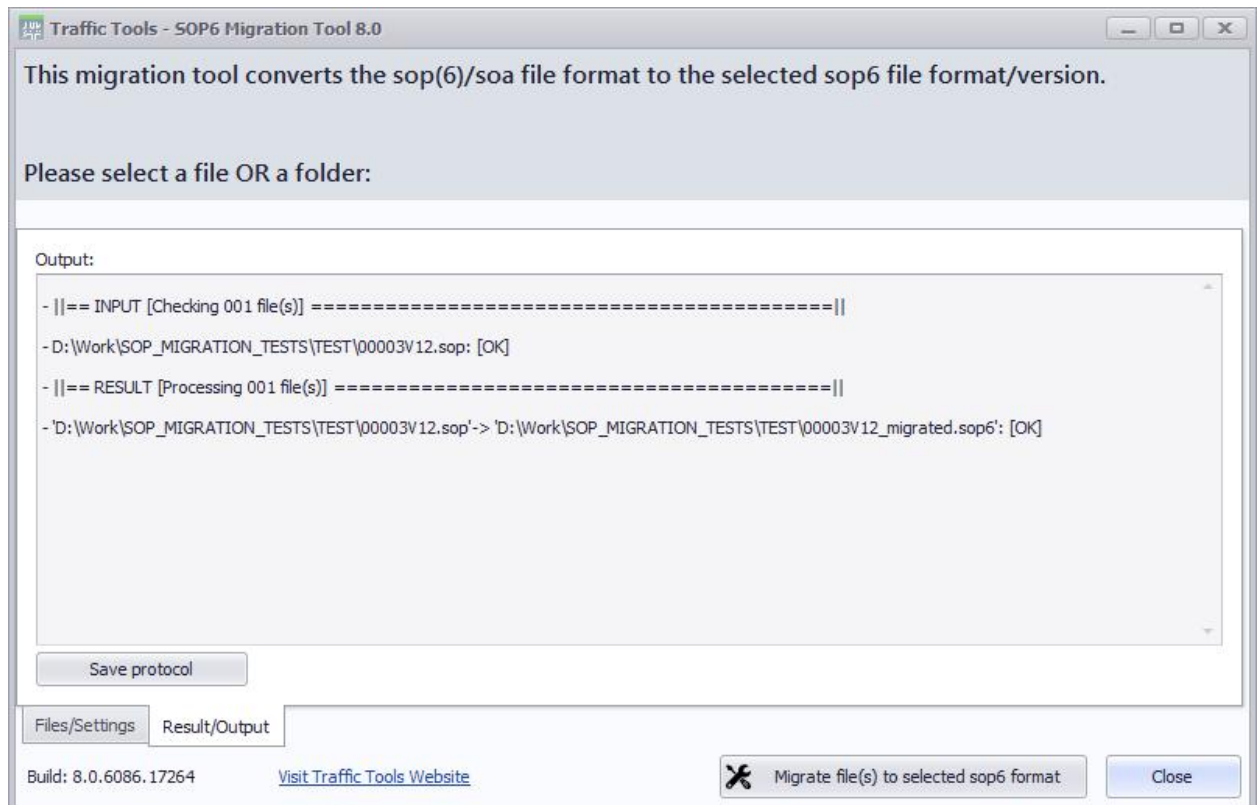

Usage

In order to run the SOP6Migrator, please run the file ...\Bin\Sitraffic.Tools.Sop6Migration.exe, that is located wihtin the folder, where you uncompressed the ZIP-file.

1. Select the option „Sitraffic sop(6)/soa files|*.sop*;*.soa" in order to select one or more files from a folder, or select option "Verzeichnis" to migrate all relevant files from a given folder. Only SOP(6) files starting with Sitraffic Office version 4.6.0 are supported!
2. Select the target version: Sitraffic Office 8.0.1+, 8.3 or Yutraffic Office (Current Version)
3. If desired, select more options.
4. Click button "Migrate file(s) to selected sop6 format" to execute the migration , a progress dialog will be shown:

5. The result of the migration is shown:

In case the migration fails for a file, you will find this information within the protocol, too.
6. The migrated files will be put side-by-side to the corresponding source file and can be identified by the filename, where the extension is changed to _migrated.sop6, e.g.:
source file: FileToMigrate.sop6 -> migrated file: FileToMigrate_migrated.sop6
7. To process more files, repeat steps 1-4
8. To close, click the corresponding button.
